-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: ____.

Election/Restrictions

Applicant's election without traverse of Group III, claims 10-14 in the reply filed on 22 February 2005 is acknowledged.

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "26" has been used to designate both a window and a hook, as seen in Figure 1 and described on page 11, lines 18 and 20. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 10-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Morse et al. (2003/0127635A1).

Morse discloses motor drive controller for a hoist having a casing 30 with a bi-directional drive motor 24 having a drive shaft 32 located within the casing comprising:

a position encoder including a position sensor 48 (paragraph 40, lines –38) also located within the chain hoist casing,

a direct mechanical drive coupling 42a from the chain drive shaft 32 to position sensor 48 also located within the casing, and

a tracking controller 36 also located within the casing and coupled to receive digitized electrical position outputs generated by the position sensor (paragraph 52) and to provide drive outputs that accelerate rotation of the drive shaft upon movement of the drive shaft from a stopped condition to a rotating condition and which decelerate rotation of the drive shaft as the position outputs approach an externally determined destination position (paragraph 52-53).

The recitation in the preamble of claim 10 that hoist is a chain motor hoist, relates only to a possible or intended use of the device being claimed, but does not further structurally limit the device.

In regards to claim 11, Morse discloses a motor amplifier 34 interposed between the motor drive 24 and the tracking controller 36 and a digital-to-analog converter.

In regards to claim 12, Morse discloses that the signals produced by the tracking controller 36 are digital and are converted to analog, then the motor amplifier sends analog signals to the motor 24.

Art Unit: 3654

In regards to claim 13, Morse discloses a motor stabilizing circuit to hold the load in place when the intend position has been achieved (paragraph 43).

Allowable Subject Matter

Claim 14 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
